

Latest innovations

Our researchers make research and development the main driver of growth and the leading force for innovation within the ArcelorMittal group. Here are some of the latest innovations we developed:

Inspired by barcodes, **Eclectic®** profiles create moving façades with a vibrant relief giving a unique and incomparable aspect.

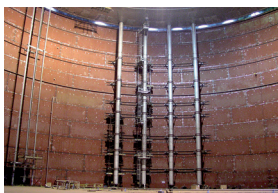

Jetgal® and **Jetskin™** metallic coatings are both produced with the **JVD technology**, offering enhanced product performance and a more environmentally sustainable production process.

ArcelorMittal **Low Carbon Vanadium (LCV) Grooved Rails** are most suitable for embedded tramway tracks due to their low carbon content.

Usibor® 2000 and **Ductibor® 1000** will bring 10% to 15% additional weight reduction to automotive hot stamped parts.

7% Ni steel has the ability to store Liquid Natural Gas (LNG) at -163°C and replaces other more costly materials.
