

Latest innovations

Our researchers make research and development the main driver of growth and the leading force for innovation within the ArcelorMittal group.

Our latest innovations include:

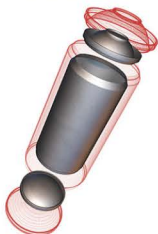

S-in motion® study, which shows how ArcelorMittal's **advanced high strength steels** can enable OEMs to achieve significant weight savings in chassis, without compromising safety.

The
intelligent
construction
choice
Steligen®

Steligen®, which will facilitate the next generation of high-performance buildings and construction techniques to therefore create a more sustainable life cycle for buildings.

Eclectic® 30, which creates an attractive light and shadow effect on façades, giving buildings a unique and incomparable look.

New **packaging steel grades** for **three-piece aerosol cans**, which enable canmakers to achieve up to 17-percent weight savings, when compared to existing solutions.

Granite® Ultramat pre-painted steel, which is long-lasting, robust, and flexible at low temperatures and offers a significantly wider range of aesthetics when compared to traditional ceramic or zinc roofs.
